Dear Kelly Burke,

Valto, Inc. is committed to providing the industry's highest quality fiberglass reinforced plastic (FRP) products while maintaining dependable service and supply. Despite ongoing efforts to mitigate cost pressures, we have experienced significant unplanned increases impacting several key raw materials. These include substantial spikes in petroleum derived resins, elevated styrene costs due to plant closures, ongoing force majeure conditions impacting certain chemicals used in resins, and increased freight and broader supply chain expenses.

As a result of these continued cost escalations, **Valto will implement a price increase of 7% on all FRP products and accessories. The price increase is effective for orders shipping on or after May 1, 2026, regardless of the date the order was placed.**

In addition, please note the following logistics policy update:

- **Updated Freight Policy – Effective April 1, 2026**
- **Pre paid LTL shipments valued under \$5,000 will be subject to a \$350 logistics fee**

This adjustment reflects rapidly rising transportation and handling costs and helps ensure we can continue to provide consistent, reliable delivery service.

We remain committed to ensuring quality and supply as we navigate these challenging market conditions. Your Valto representative is available to discuss these changes and assist with any planning needs to minimize disruption.

Thank you for your continued support.

Regards,

Matthew Shields
Vice President, Building Products & Transportation
